

Moduflex Access 2 Plus

Code ZMC020

- Both the anaesthesia machine head and absorber are precision machined to reduce the number of connections, greatly reducing the risk of leaks.
- Quick-connect fresh gas outlet for easy and safe switching between closed and open breathing circuits.
- Precision rotameter up to 4 lpm with rotating float and large scale for easy reading.
- Recessed oxygen flush to prevent accidental activation.
- Oxygen hose with threaded connection to prevent accidental disconnection.
- Consumables included: Y-circuit, 2 and 3 L bags, fresh gas and evacuation tubing, Krytox grease, Key filler.

SHELF

Sturdy top shelf for monitors and equipment

MANOMETERS

Independent pressure gauges for closed and open circuits

BAIN MANOMETERS

For closed and open circuits

CONCENTRATOR O2

AXAVET OLV-5 Oxygen Concentrator (optional)

PENLON VAPORISER

Maintenance-free

PRECISION ROTAMETER

With rotating float and large scale

OXYGEN FLUSH

Flush-mounted oxygen flush, prevents accidental activation

ABSORBER CO2

1500 mL CO2 absorber with condensation trap

TROLLEY

Trolley with O2 concentrator base and braked wheels

The **Moduflex Access 2 PLUS** is the new version of the **inhalation anaesthesia machine**. Developed in Canada by DISPOMED, it features numerous improvements and more modules of advanced technology and PREMIUM quality modules, such as the Penlon vaporiser.

Warranty: 5 years on equipment, except consumables.

ITEMS FOR CLINICAL USE [Z] OTHERS

Note: the manufacturer reserves the right to modify the characteristics and photographs of the products.

Absorber

- 1500 mL CO₂ absorber designed for easy and quick change of soda lime, with condensation trap against water accumulation that prevents solidification of soda lime and corresponding increase in breathing resistance.
- The inspiratory and expiratory domes are positioned so that the valves can be easily observed during procedures.
- Fast bolus ventilation due to a special mechanism that keeps the bag inflated.
- Manometer included for precise monitoring of the patient's breathing pressure

Moduflex Bain Circuit Adapter Code- ZMC022

Included with the equipment

- The Moduflex Bain circuit adapter is mainly used with small animals or animals with breathing difficulties due to its lower breathing resistance.
- Moduflex Bain allows more control during interventions, as the breathing bag is always inflated, the patient can be ventilated immediately, unlike the use of other open circuits (e.g. T de Ayre, Jackson-Rees), where ventilation can only be performed once the bag reaches a certain level of inflation.
- Manometer included to accurately monitor the patient's breathing pressure.
- With integrated exhaust valve for rapid transfer between spontaneous and controlled ventilation, helps prevent a defect in the exhaust system from spilling over into the patient's fresh gas supply.
- Its gas evacuation port is integrated into the mounting bracket, eliminating the risk of obstruction in the tubing.
- Consumables included: Bain circuit, 1 L bag, fresh gas tubing.

Trolley Code - ZMC021

Included with the equipment

- Moduflex™ Access 2 Plus is integrated in a sturdy trolley with a floor area of only 60 x 50 cm and an integrated base for oxygen concentrator, which saves space.
- With 2 receptacles for hanging closed and open circuits and holder for attaching exhaust gas filters on the base, adaptable to any size.
- Sturdy 35 x 30 cm top shelf suitable for monitors and equipment

Vaporiser Code - ZMC023

Included with the equipment

- We have selected for the Moduflex™ Access 2 Plus the Penlon Sigma Delta vaporiser, maintenance free for 10 years of regular use, producing accurate concentrations at different flow and temperature conditions, even at low flow rates.
- With safety filler that prevents breathing of anaesthetic, key filler included.
- Cagemount assembly.
- Award-winning, internationally recognised design
